

Lumenis ResurFX™

The Lumenis ResurFX™ fractional laser offers state-of-the-art, non-ablative skin resurfacing technology to improve age/sun spots; uneven skin tone; scars from acne or surgery; hyperpigmentation; fine lines and wrinkles and more. Non-ablative means skin cells are not destroyed or ablated and fractional means it affects only a fraction or percentage of the skin. This unique technology results in comfortable, fast treatment with minimal recovery time, unlike the CO2 laser that has several days or more of peeling, crusting and possible swelling after treatment.

The optimum benefits of ResurFX™ are obtained with several treatments depending on the condition of the skin and desired results.

HOW DOES RESURFX™ WORK?

The ResurFX™ fractional laser utilizes laser microbeams to heat the deeper layers of the skin, which stimulates the production of new collagen and elastic fibers. Stimulating new collagen production is the key to a more radiant, youthful skin. The advanced scanner delivers the laser beams in a precise manner with integrated cooling to ensure maximum comfort.

THE TREATMENT

A topical numbing cream is applied to the target areas before treatment and the treatment tip is chilled with cold water for comfort. Treatments can take 20-30 minutes or more, depending on the size of the targeted area. You may experience a warm or prickling sensation as the laser is applied to the skin but the treatment is gentle and should not feel uncomfortable.

WHAT CAN YOU EXPECT AFTER TREATMENT?

Following treatment, you may experience some redness and/or bronzing, swelling or irritation similar to a mild sunburn, depending on the customized treatment settings. These effects typically subside in 2 to 3 days and you are able to resume your daily activities without discomfort. Sun exposure before and after treatment should be avoided and a sunscreen with SPF of 30 or higher should be worn in the days after the procedure. Once completely healed, continue to wear at least a sunscreen of SPF 30 daily to help protect your skin long-term.

WHEN WILL YOU SEE RESULTS?

The ResurFX™ works to stimulate deep collagen and regeneration over a sequence of treatments. Typically, about 3 sessions are needed to have visible improvement although you may notice some changes in pore size and skin texture after the first treatment. Optimum results are achieved after 3-5 sessions provided in 4-5 week intervals, although this varies by the person and their goal. You may continue to see improvements for up to 6 months following treatment.

IS RESURFX™ RIGHT FOR YOU?

Lumenis® energy-based treatments are not suitable for everyone and does carry some risk. ResurFX™ is not suitable when you have active infections (viral, fungal or bacterial), inflammatory skin conditions or skin cancer. Risks may include: redness, swelling, scarring, or a change of pigmentation.

Schedule a free consultation - we will work with you to determine whether ResurFX™ is appropriate given your skin condition and meets your personal skin care goals.
